Profile

Software Engineering student with a passion for AI agent automation, workflow design, and intelligent system development. Actively exploring AI — from large language models and AI agents to autonomous automation pipelines. Skilled in Python, C++, and database management, with hands-on experience building automation workflows, AI-powered tools, and full-stack projects.

Education

BS Software Engineering (4th Semester)

COMSATS University Islamabad – Lahore Campus | 09/2024 – Present | Lahore

Professional Experience

Automation Workflow Developer (Personal Projects)

Designed and deployed automation workflows using n8n and AI agents for lead generation, clinic appointment handling, and messaging automation. Integrated webhooks, REST APIs, and JSON pipelines to build scalable systems reducing manual work.

Crypto Trading (Using Different Exchanges)

Actively traded cryptocurrencies across multiple exchanges. Developed skills in market analysis, risk management, and order execution with practical understanding of blockchain-based financial markets.

E-Commerce Operations (Daraz)

Managed end-to-end store operations including product listings, order processing, inventory management, customer support, and fulfillment on Daraz.

Projects

Stocky – Stock Analyser

Full-stack stock analysis tool with n8n webhook backend and React frontend using Recharts for data visualization. Styled with CSS-in-JS.

AI Virtual Mouse

AI-powered virtual mouse using computer vision (Python backend) with React + Vite frontend styled in Tailwind CSS v4. Enables gesture-based cursor control.

Dental Clinic Automation

Automated appointment and inquiry management for a dental clinic using n8n workflows, streamlining patient communication and scheduling.

Snake Game with Database Integration

Console-based Snake game in C++ with SQL-based score storage and persistent player data handling.

VPN Using API

VPN integration tool connecting to VPN services via API for programmatic connection management and status monitoring.

Skills

Technical: Python, C++, SQL, OOP, JSON & API Handling

Automation: Workflow Design, AI Prompt Engineering, Lead Generation, n8n

Business: Crypto Trading, Daraz, Marketplace Management, Problem Solving
